## Abstracts

According to our (Global Info Research) latest study, the global High-Temperature Fiber market size was valued at USD 8096.6 million in 2023 and is forecast to a readjusted size of USD 12200 million by 2030 with a CAGR of 6.0% during review period.

High-temperature fibers are capable of surviving harsh environments and extreme temperatures. Normal fibers can be damaged due to extreme atmospheric conditions, fiber type, time of exposure, etc. High-temperature fibers are able to withstand temperatures that are above 200°C. It possesses specific characteristics such as excellent electrical insulation, high-strength bearing capacity, chemical resistance, low density, high thermal resistance, limiting oxygen index, and others. These fibers include ceramic fibers, aramid fibers, and others. The high-temperature fibers are used in applications where the product needs to be fatigue resistant, high usable strength, hydrogen permeation, and excellent resistance to higher temperatures.

The Global Info Research report includes an overview of the development of the High-Temperature Fiber industry chain, the market status of Aerospace (Basalt, Aramid), Electrical and Electronics (Basalt, Aramid), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of High-Temperature Fiber.
