High Temperature Gel Permeation Chromatography (HT-GPC) is a variation of gel permeation chromatography (GPC), also known as size exclusion chromatography (SEC), that operates at elevated temperatures. GPC/SEC is a technique used for the analysis and characterization of macromolecules, particularly polymers, based on their molecular size and distribution.

In HT-GPC, the separation of macromolecules is performed at temperatures higher than the ambient temperature typically used in standard GPC/SEC. The elevated temperature helps improve the dissolution and elution of high molecular weight polymers, allowing for better resolution and accuracy in analyzing the molecular weight distribution of the sample.

HT-GPC can provide valuable insights into the molecular weight distribution, molecular weight averages, and other structural characteristics of polymers, aiding in research,

quality control, and product development within the polymer industry.
