## Abstracts

According to our (Global Info Research) latest study, the global High-Temperature Heat Pump Steam Solution market size was valued at US\$ 897 million in 2025 and is forecast to a readjusted size of US\$ 1261 million by 2032 with a CAGR of 5.0% during review period.

High-temperature heat pump steam solutions refer to a complete energy-saving heating system driven by electricity, based on the reverse Carnot cycle, that absorbs heat from air, groundwater, or low-grade industrial waste heat, raises the heat energy grade to above 100°C after work by a high-temperature compressor, heats feedwater through a condenser, and produces low- to medium-pressure industrial saturated steam under the action of a flash evaporator/steam compressor. This system is used to replace or partially replace gas/coal/electric boilers to provide process steam for industrial production, achieving an energy efficiency level of COP 1.5 to 3.0 or higher and near-zero on-site carbon emissions.
