A high-temperature kiln is a furnace or oven designed to heat materials to temperatures well above normal operating temperatures. These types of kilns can operate at temperatures ranging from 1000°C (1832°F) to over 2000°C (3632°F), and they are used in a variety of industries for various processing applications. High-temperature kilns are typically constructed with durable and refractory materials, such as high-temperature ceramics, metals, and alloys, which can withstand the extreme temperatures and provide excellent insulation. The kilns may use various heating elements, including electric resistance heating, combustion burners, or gas-fired heating.
