The global High Temperature Stealth Material market size is expected to reach \$ 135.5 million by 2029, rising at a market growth of 15.8% CAGR during the forecast period (2023-2029).

High temperature stealth materials need to have excellent high temperature resistance, stability and oxidation resistance. Among them, SiC fiber is a very important high temperature stealth material. It has an extremely high melting point and low thermal expansion coefficient, and can maintain stable mechanical properties and wave-absorbing properties in high-temperature environments. In addition, SiC fiber also has excellent antioxidant properties and can remain stable in high-temperature oxidizing environments. High temperature resistant stealth materials have broad application prospects in the future military and aerospace fields. With the continuous advancement of technology and the improvement of production processes, high temperature stealth absorbing materials will have more extensive applications.

High temperature stealth material is a material that can absorb or weaken radar, infrared and visible light, making it difficult to detect targets. This material is commonly used in the military and aerospace fields to protect aircraft and weapons systems from detection and attack in high-temperature environments.
