The High Temperature Steam Solenoid Valve is a solenoid valve designed to control the flow of high temperature steam, typically operating at temperatures up to 180°C (356°F) or higher. The valve is actuated by a solenoid coil that opens and closes the valve for fast, precise flow control. These valves are widely used in the power, chemical, food and pharmaceutical industries for the safe and efficient management of steam systems. High-temperature steam solenoid valves are made of high-temperature resistant materials and specially designed to ensure reliability and durability in harsh environments.
