According to our (Global Info Research) latest study, the global High Temperature Vacuum Oven market size was valued at US\$ 118 million in 2025 and is forecast to a readjusted size of US\$ 204 million by 2032 with a CAGR of 8.1% during review period.

High Temperature Vacuum Oven is a specialized piece of equipment used for high-temperature heating and drying in a vacuum or low-pressure environment. Its core principle is to reduce the pressure inside the oven through a vacuum system, allowing moisture, solvents, or volatile components in the material to escape rapidly under lower oxygen and pressure conditions. Simultaneously, a heating system provides a stable temperature, thereby achieving processes such as dehydration, solvent removal, degassing, curing, preheating, and heat treatment. In 2025, the global production of High Temperature Vacuum Oven reached 18,300 units, with a global average price of US\$6,258 per unit. The gross profit margin of major companies in the industry was approximately 32%-48%.
