The global High Temperature Vacuum Oven market size is expected to reach \$ 204 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

High Temperature Vacuum Oven is a specialized piece of equipment used for high-temperature heating and drying in a vacuum or low-pressure environment. Its core principle is to reduce the pressure inside the oven through a vacuum system, allowing moisture, solvents, or volatile components in the material to escape rapidly under lower oxygen and pressure conditions. Simultaneously, a heating system provides a stable temperature, thereby achieving processes such as dehydration, solvent removal, degassing, curing, preheating, and heat treatment. In 2025, the global production of High Temperature Vacuum Oven reached 18,300 units, with a global average price of US\$6,258 per unit. The gross profit margin of major companies in the industry was approximately 32%-48%.

This report studies the global High Temperature Vacuum Oven production, demand, key manufacturers, and key regions.
