According to our (Global Info Research) latest study, the global High Tensile Reclaim Rubber market size was valued at US\$ 2321 million in 2025 and is forecast to a readjusted size of US\$ 3321 million by 2032 with a CAGR of 5.8% during review period.

Global sales of High Tensile Reclaim Rubber was about 3620 k tons in 2025 with average price of 623 USD/ton. The average gross margin of the industry is between 15%-20%. China is the largest producer of the product globally.

High Tensile Reclaim Rubber is a grade of reclaimed rubber produced from post-vulcanized rubber waste (commonly selected inner-tube/tyre compounds). Through reclaiming / devulcanization and refining—often assisted by controlled chemical or thermo-mechanical processes—the material is processed into a reusable rubber feedstock with relatively high tensile strength and better batch consistency versus standard reclaim rubber. It is used as a cost- and resource-saving substitute/extension for virgin rubber in compounding, while targeting higher mechanical performance in the final compound.
