According to our (Global Info Research) latest study, the global High Tensile Strength Composite Copper Foil market size was valued at US\$ 252 million in 2025 and is forecast to a readjusted size of US\$ 2001 million by 2032 with a CAGR of 35.2% during review period.

High Tensile Strength Composite Copper Foil is an advanced current collector material engineered to deliver enhanced mechanical strength and structural durability in next-generation battery systems. It is manufactured by depositing ultra-thin copper layers on both sides of a polymer base film through vacuum deposition technology, forming a lightweight composite structure that maintains high electrical conductivity while significantly improving tensile strength and mechanical stability. Its advantages include improved safety, reduced copper consumption, higher energy density, and strong resistance to mechanical deformation. The capacity utilization rate in 2025 reached 70%, and the industry's average gross margin was approximately 29%. Production in 2025 totaled 87.5 million sqm at an average price of 2.8 USD per sqm. The upstream segment mainly consists of PET and PP base films, copper sputtering targets, and magnetron sputtering equipment, with representative suppliers including Jiangsu Shuangxing, Wanhua Chemical, GRINM Advanced Materials, and Dongwei Technology. The midstream focuses on base film surface treatment, magnetron sputtering copper deposition, multilayer structure formation, and quality control to ensure conductivity, adhesion, and mechanical strength. Downstream applications are primarily in power batteries and consumer electronics batteries, with key customers including Tesla, CATL, BYD, Samsung SDI, and LG Energy Solution.
