Additionally, advancements in technology and the expanding electronics sector further contribute to the positive market prospects for High TG Halogen-Free Copper Foil.

High TG Halogen-Free Copper Foil is a specialized type of copper foil used in electronic printed circuit boards (PCBs). It is designed to withstand high-temperature environments and provides excellent thermal stability. High TG (glass transition temperature) refers to the temperature at which the material transitions from a rigid state to a soft or flexible state. This copper foil is manufactured using halogen-free materials, which means it does not contain chlorine or bromine compounds that can emit toxic fumes when exposed to high heat or flame. High TG Halogen-Free Copper Foil offers exceptional electrical conductivity, heat resistance, and flame retardancy, making it ideal for high-performance and safety-critical applications in the electronics industry.
