Abstracts

According to our (Global Info Research) latest study, the global High-Tg PCB Broads market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Tg is one of the most important properties of any epoxy and is the temperature region where the base material (polymer or glass) changes from a solid, rigid and glassy state to rubbery state. Every PCB has a different Tg value based on its substrate. And PCB will start to change its state which will make a bad effect in PCB fabrication if the operating temperature of PCB exceeds its Tg value. High Tg PCB boards have a better stability at high temperatures because the substrate provides better heat resistance, mechanical and chemical stability for the board.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
