Abstracts

According to our (Global Info Research) latest study, the global High Thermally Conductive Polyimide Film market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

These are polyimide films engineered to possess superior thermal conductivity compared to standard polyimide films. Standard polyimides are excellent electrical insulators but have inherently low thermal conductivity. In contrast, high thermally conductive versions achieve significantly improved heat transfer capabilities while retaining the valuable properties of polyimides, such as:

High-Temperature Resistance: Withstands extreme temperatures, making them ideal for hot environments.

Excellent Dielectric Properties: Provides electrical insulation for electronic components.

Mechanical Strength: Offers good durability and dimensional stability.
