## Abstracts

High-throughput screening (HTS) is a method for scientific experimentation especially used in drug discovery and relevant to the fields of biology and chemistry. Using robotics, data processing and control software, liquid handling devices, and sensitive detectors, High-Throughput Screening allows a researcher to quickly conduct millions of chemical, genetic or pharmacological tests.

Scope of the Report:

This report studies the High Throughput Screening market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the High Throughput Screening market by product type and applications/end industries.

Based on technology, the label-free technology segment is expected to grow at the highest CAGR during the forecast period. The major advantage offered by label-free technology is that it can help in the study of varied cell types and targets. Label-free assays also provide simple methods for studying complex biological pathways. The label-free technology is set to reduce drug failure caused by toxicity. These factors are likely to boost the growth of this technology market.

In 2017, North America accounted for the largest share of the HTS market, followed by Europe and Asia Pacific. Factors such as the large spending on pharmaceutical R&D, growing adoption of HTS, availability of government funding, and the presence of major key players in the region are responsible for the large share of the North American HTS market.

The global High Throughput Screening market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx%

between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
