Abstracts

The global High Vacuum Baffle Valve market size is expected to reach \$ 1505 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

High vacuum baffle valves, also known as high vacuum angle valves or inline valves, are specialized vacuum components used to switch on or off the airflow in high vacuum systems, typically operating within pressure ranges of 10⁻² Pa to atmospheric pressure. These valves employ either rubber shaft seals (elastomeric sealing with O-rings) for economic applications or bellows shaft seals (metal bellows, no dynamic seal friction) for ultra-high vacuum conditions requiring lower leakage rates. High vacuum baffle valves rely on electromagnetic or pneumatic actuation. When the solenoid coil is energized, the valve opens to allow gas flow; when de-energized, the valve closes rapidly (DN100)
