## Abstracts

The global High Voltage Cable Intelligent Grounding Box market size is expected to reach \$ 557 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of intelligent grounding boxes for high-voltage cables reached 1.61954 million units, with an average selling price of US\$220 per unit. The global annual production capacity of intelligent grounding boxes for high-voltage cables is approximately 2.2 million units, with a gross profit margin of approximately 26.7%. Intelligent grounding boxes for high-voltage cables are specialized devices used in high-voltage power distribution systems to achieve safe grounding management of high-voltage cables and equipment. They combine intelligent monitoring technology with traditional grounding boxes, featuring automatic detection, control, and alarm functions to ensure the safe operation of the system. The upstream of the intelligent grounding box industry chain includes copper/aluminum alloys, terminals, insulating resin, and insulating rubber; the midstream consists of manufacturers of intelligent grounding boxes for high-voltage cables; and the downstream mainly comprises the electrical, industrial, and construction sectors.

Currently, the market for intelligent grounding boxes for high-voltage cables is showing steady growth, primarily used for grounding protection and safety monitoring in substations, power plants, transmission networks, and large industrial power distribution systems. With the increasing emphasis on intelligent operation and maintenance, fault diagnosis, remote monitoring, and higher standards for personal and equipment safety, the market demand for intelligent grounding boxes with high reliability, rapid fault location, modular and standardized design, energy efficiency optimization, and compatibility with multiple protection strategies is rising. Simultaneously, regional

certification, localized service capabilities, and deep integration with digital power systems (such as power supply reliability analysis and condition assessment) have become key competitive factors, driving manufacturers to develop collaboratively in hardware durability, interface interoperability, and software platforms.
