According to our (Global Info Research) latest study, the global High Voltage Earthing Sticks market size was valued at US\$ 293 million in 2025 and is forecast to a readjusted size of US\$ 449 million by 2032 with a CAGR of 6.3% during review period.

High-voltage earthing sticks are safety protection tools used for temporary grounding during the maintenance and repair of power systems. These devices are primarily used to safely release any residual charge or induced voltage to the ground before maintenance or repair of high-voltage lines, transformers, switchgear, and substation equipment, thereby preventing electric shock accidents. High-voltage earthing sticks typically consist of an insulating rod, conductive clamps, a grounding conductor, and connecting components. The insulating rods are often made of fiberglass or epoxy composite materials to ensure safe insulation performance under high-voltage environments. From an industry chain perspective, upstream suppliers mainly include raw material suppliers such as fiberglass insulating rods, copper grounding wires, conductive clamps, and insulating accessories; midstream manufacturers are responsible for product design, assembly, and safety performance testing; downstream applications mainly include power companies, transmission and distribution maintenance units, railway electrification maintenance departments, industrial power plants, and electrical maintenance service companies. Products are mainly sold through power equipment suppliers, power system procurement channels, and industrial safety equipment distributors. In 2025, the global production of high-voltage earthing sticks was approximately 1.97 million sets, with a global average selling price of approximately US\$145 per set. The gross profit margin of major companies in the industry is approximately 28%-42%. The global total production capacity is estimated at approximately 2.63 million units in 2025.
