Abstracts

The global High Voltage Fuse for EV market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A fuse is a device for overcurrent protection of a circuit. When the circuit is short-circuited or overloaded, the thermal effect of the over-current causes the melt to melt and gasify to produce a fracture, and the fracture generates an arc. The fuse cuts off the faulty circuit by extinguishing the arc, and plays the role of circuit protection. This article counts the high-voltage protection fuses in the EV field. In EV applications, the application voltage is generally 60VDC-1000VDC, which mainly protects the high current charging and discharging of the battery, the overcurrent protection of the vehicle drive circuit, and the air conditioner, DC/DC (DC to DC power supply), PTC (heating), air pump, etc. OBC (slow charging) and other protection; in the application of EV charging piles, the application voltage is generally 150VDC-1000VDC, and the fuse is mainly for short-circuit protection of the DC side circuit of the charging pile.
