The global High Voltage Gas Discharge Tube market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High Voltage Gas Discharge Tubes are devices that are used to protect electronic circuits from high voltage surges or transients. They consist of a sealed glass or ceramic tube filled with a gas mixture, typically neon or argon, at a low pressure. When a high voltage is applied across the electrodes of the tube, the gas ionizes and conducts electricity, allowing the excess voltage to be safely discharged through the tube.

This report studies the global High Voltage Gas Discharge Tube production, demand, key manufacturers, and key regions.
