A high voltage ignition transformer is a transformer designed to generate extremely high voltage from a lower input voltage and is primarily used in ignition systems to ignite fuel in a variety of industrial equipment, including oil or gas burners, boilers, furnaces, and certain types of engines. Its primary purpose is to generate a spark strong enough to ignite the air-fuel mixture by providing the necessary voltage. These transformers are used to step up the input voltage (usually 120V or 240V AC) to a higher voltage, typically in the range of 5,000V to 15,000V, depending on the application.
