According to our (Global Info Research) latest study, the global High Voltage Silicon Stack market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The high-voltage silicon stack is also called a silicon column. It is a silicon high frequency high voltage rectifier diode. The working voltage is between thousands of volts and tens of thousands of volts. It is often used for high-frequency and high-voltage rectification in black and white TV sets or other electronic instruments. The reason why it can have such a high withstand voltage is that its interior is composed of several silicon high-frequency diode cores connected in series. The outside is encapsulated with high-frequency ceramics.
