Abstracts

The global High Voltage Silicon Stack market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The high-voltage silicon stack is also called a silicon column. It is a silicon high frequency high voltage rectifier diode. The working voltage is between thousands of volts and tens of thousands of volts. It is often used for high-frequency and high-voltage rectification in black and white TV sets or other electronic instruments. The reason why it can have such a high withstand voltage is that its interior is composed of several silicon high-frequency diode cores connected in series. The outside is encapsulated with high-frequency ceramics.

This report studies the global High Voltage Silicon Stack production, demand, key manufacturers, and key regions.
