## Abstracts

According to our (Global Info Research) latest study, the global High Volume Low Pressure (HVLP) Spray Guns market size was valued at USD 1133.9 million in 2023 and is forecast to a readjusted size of USD 1805.5 million by 2030 with a CAGR of 6.9% during review period.

This report studies the High Volume Low Pressure (HVLP) Spray Guns market.

Spray gun is a small, air-operated tool that sprays various media including ink and dye, but most often paint by a process of nebulization. For low pressure spray gun, the paint container (being either gravity feed or suction feed) is placed under pressure forcing the paint material through the nozzle. A large volume of low pressure air is then intersected with the mainstream causing the atomization process. Because of the lowered pressure, the atomized paint has less bounce back. Less overspray, greater transfer efficiency.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
