This report studies the High Volume Low Pressure (HVLP) Spray Guns market.

Spray gun is a small, air-operated tool that sprays various media including ink and dye, but most often paint by a process of nebulization. For low pressure spray gun, the paint container (being either gravity feed or suction feed) is placed under pressure forcing the paint material through the nozzle. A large volume of low pressure are is then intersected with the mainstream causing the atomization process. Because of the lowered pressure, the atomized paint has less bounce back. Less overspray, greater transfer efficiency.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively.
