A walking boot is a medical device that is usually used to treat ankle or foot injuries, such as ankle sprains, foot bone fractures, Achilles tendon ruptures, etc. Long boots are usually made of a soft material that covers the entire foot and ankle for support and protection. It features a high shaft that immobilizes the ankle and restricts foot movement. The upper part of the long walker boot usually uses Velcro or other adjustable fastening device, which can be adjusted as needed to provide more personalized support and fixation. The advantage of long boots is that they provide total support and protection around the foot and ankle, which can reduce pain, swelling, and other discomfort. At the same time, it can also limit the range of motion of the foot, which can speed up rehabilitation and recovery.
