Abstracts

According to our latest research, the global Highspeed Railway 6C Detection System market size will reach USD 2259 million in 2031, growing at a CAGR of 4.1% over the analysis period.

In order to comprehensively improve the detection and monitoring methods of the contact network and pantograph, realize full coverage inspection of the contact network and pantograph, improve detection efficiency and ensure safety, the Chinese Ministry of Railways issued the 'General Technical Specifications for highspeed railway 6C detection system (6C System)' in 2012, requiring the construction of a highspeed railway 6C detection system (6C system) to conduct inspections, detection, monitoring and inspections of the contact network and substation equipment, and then guide power supply maintenance. The highspeed railway 6C detection system is an integrated intelligent monitoring system that aims to conduct comprehensive detection and real-time monitoring of the contact network and pantograph through advanced technical means to ensure the safe and stable operation of the railway power supply system. Through automated inspections and precise detection, the system can timely discover and locate potential safety hazards, provide a scientific basis for the maintenance and repair of power supply equipment, and effectively improve detection efficiency and ensure the safety of train operation.
