According to our (Global Info Research) latest study, the global High-Power Bus Laser Cutting Control System market size was valued at US\$ 1243 million in 2025 and is forecast to a readjusted size of US\$ 2365 million by 2032 with a CAGR of 9.6% during review period.

The High-Power Bus Laser Cutting Control System is a control platform specifically designed for high-power laser cutting equipment. This bus control system integrates a board-based control system, a servo control system, an industrial computer, a monitor, an operator panel, and other components. Based on EtherCAT bus technology, it enables real-time control of the mechanical transmission devices, lasers, auxiliary gases, and other auxiliary peripherals of sheet metal planar cutting machines or pipe 3D cutting machines. The bus control system features high stability, high real-time performance, high integration, strong scalability, and ease of installation, but its price is higher than that of board-based control systems. In 2025, the global production of High-Power Bus Laser Cutting Control Systems was approximately 166,000 units, with an average price of approximately US\$7,277.493 per unit and a gross profit margin of approximately 79%. Downstream customers include laser equipment manufacturers such as Han's Laser, HGLaser, YAW Machine Tools, Leadcore Laser, Bystronic, Jiatai Laser, LaserMing Laser, Qingyuan Laser, Hongshi Laser, Lens Technology, and JPT Optoelectronics.

High-Power Bus Laser Cutting Control Systems are a crucial component of high-end manufacturing equipment control technology, and their market potential is closely linked to the overall growth of the laser cutting industry. With the continuous improvement of automation, digitalization, and industrial intelligence in global manufacturing, the

demand for high-power cutting equipment continues to grow, particularly in areas such as lightweight automotive structural components, large steel structures, aerospace, and energy equipment. Traditional control architectures suffer from limitations such as inter-module communication latency and integration difficulties, while bus-based control architectures offer higher bandwidth, lower latency, and richer data interaction capabilities, thereby improving the overall performance of high-power systems. System manufacturers are increasingly adopting high-speed bus solutions such as EtherCAT and Industrial Ethernet to achieve unified scheduling of multi-axis motion, laser power control, and real-time feedback. Simultaneously, domestically produced controllers are competing with international brands, with manufacturing hubs in China, Germany, and Japan becoming major growth engines.
