## Abstracts

According to our latest research, the global Highway Digital Retina Platform market size will reach USD 3610 million in 2031, growing at a CAGR of 11.8% over the analysis period.

The highway digital retina platform is an intelligent perception system that integrates artificial intelligence, edge computing and video analysis technologies. It is designed to process and intelligently analyze video surveillance data along highways in real time. Based on the principle of bionics, the platform simulates the perception mechanism of the human retina, builds an end-edge-cloud collaborative visual computing architecture, and realizes efficient identification and early warning of traffic abnormalities (such as congestion, accidents, pedestrian intrusions, spilled objects, etc.), thereby improving the safety and management efficiency of highways.
