Abstracts

When you're moving fast in the mountains, good vision is of the utmost importance. The last thing you want are bugs flying in your eyes, or to misplace a step because of the sun's blinding glare. Protecting your eyes from harmful UV rays is also vitally important, particularly in snowy environments that can reflect 80-90% of solar radiation back in your eyes. With hiking sunglasses, however, you can effectively block out nearly 100% of harmful UV rays from your eyes, whilst also enhancing your vision out in nature.
