Abstracts

The global Hillside Protection Net market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hillside protection nets are suitable for high mountains and ridges with buffer zones next to building facilities. They can intercept rockslides, flying rocks, avalanches, and mudslides outside building facilities and avoid damage to building facilities caused by disasters. In addition to its contribution to stabilizing the slope, the wire rope protection net can also prevent the slope from further weathering and erosion. It has no special requirements for the morphological characteristics of the slope and does not destroy or change the original landform and vegetation growth conditions of the slope. Its open character retains the necessary conditions for the subsequent implementation of artificial slope greening when conditions and needs arise in the future. Green plants can grow freely in its open space, and the soil-fixing effect of plant roots is integrated with the slope protection system. This inhibits slope damage and soil erosion, which in turn protects the landform and slope vegetation, achieving the best slope protection and environmental protection purposes.
