Abstracts

Hindered amine light stabilizers (HALS) are chemical compounds containing an amine functional group that are used as stabilizers in plastics and polymers.[1] These compounds are typically derivatives of tetramethylpiperidine and are primarily used to protect the polymers from the effects of photo-oxidation; as opposed to other forms of polymer degradation such as ozonolysis. They are also increasingly being used as thermal stabilizers.

Scope of the Report:

This report focuses on the Hindered Amine Light Stabilizers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Based on end-use industry, the packaging segment is expected to lead the HALS market during the forecast period. Due to stringent regulations, only FDA and EU approved HALS products are used in packaging applications. This is done to protect consumers from harmful contamination by compounds inadvertently from contact materials into the food, thereby protecting delicate colours, flavours, vitamins, and nutrients of foods and beverages. Such attributes are expected to fuel the demand for HALS products.

The Asia Pacific region led the HALS market in 2017 and is expected to continue to lead during the forecast period, wherein China is a major consumer. The high demand for HALS is primarily due to the high demand from plastics producers and automotive manufacturers, which is expected to drive the market in the region.

The worldwide market for Hindered Amine Light Stabilizers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from
