The global Hindfoot Arthrodesis Nail market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Hindfoot arthrodesis nail is medical device used in hindfoot arthrodesis, a surgical procedure to fuse the bones of the ankle and hindfoot. This nail is typically made of metal and is designed to provide stability and support during the healing process. The nail is inserted into the ankle joint through a small incision in the skin, and fixed into place with screws or other fixation devices. It promotes bone fusion by compressing the bones together and encouraging new bone growth. The hindfoot arthrodesis nail is designed to be minimally invasive, providing a faster and less painful recovery for patients.
