A hinged knee splint is a medical device that is commonly used to treat knee injuries or to recover after surgery. This splint consists of a hinged frame and two adjustable support bars that provide stable support and protection while allowing a certain degree of knee mobility. Hinged knee splints are designed to control the motion of the knee while protecting and stabilizing the damaged joint. Its hinge structure allows the knee to move within the allowable range, and the adjustable support bar can adapt to different knee sizes and shapes to provide personalized treatment and rehabilitation. Hinged knee splints are widely used in the treatment and rehabilitation of knee injuries, such as anterior cruciate ligament injuries, meniscus injuries, etc.
