HIP silicon nitride ceramic ball is a silicon nitride ceramic ball prepared by hot isostatic pressing technology, which represents one of the highest levels of silicon nitride material preparation. Hot isostatic pressing technology is a method of placing powder or green body in high-pressure gas and performing isotropic pressure treatment at high temperature. This method allows silicon nitride ceramic balls to reach their theoretical maximum density, significantly enhancing their service life and performance?. As a high-performance ceramic material, hot isostatic pressed silicon nitride balls have wide application prospects and huge market potential. With the continuous advancement of technology and the development of industry, the application fields of silicon nitride ceramic balls will become more and more extensive.
