According to our (Global Info Research) latest study, the global Hipot Calibration Service market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Hipot calibration service refers to the process of calibrating hipot testers or high potential testers. Hipot testers are electrical safety testing instruments used to verify the insulation integrity of electrical equipment or components. The calibration service ensures that the hipot tester is accurately measuring the voltage and current levels during testing.

During the calibration process, the hipot tester is compared to a known standard to determine if it is providing accurate and reliable measurements. If any discrepancies are found, adjustments or repairs are made to bring the tester back into calibration.

Hipot calibration service is typically performed by specialized calibration laboratories or service providers that have the necessary equipment, expertise, and traceability to national or international standards. It is important to regularly calibrate hipot testers to ensure the safety and reliability of electrical equipment and to comply with industry regulations and standards.
