## Abstracts

The global Histology Equipment market size is expected to reach \$ 2558 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Tissue dissection, slicing, preparation, probing, staining, and analysis require tools that reliably produce high-quality samples. Any histology procedure involves embedding tissue followed by a slicing or chopping step for slide preparation. Microtomes, cryostats, freezing stages, and tissue choppers are available. Additionally, staining tools, such as automated stainers, are available for immunohistochemistry that is performed simultaneously. Many histology experiments require perfusion; perfusion systems and chambers are listed for easy evaluation.

The major players in global Histology Equipment market include Leica, Roche, Thermo Fisher, etc. The top 3 players occupy about 70% shares of the global market. North America and Europe are main markets, they occupy about 80% of the global market. Tissue-processing Systems is the main type, with a share about 55%. Hospitals is the main application, which holds a share about 40%.
