HMDS adhesion promoter is a chemical compound widely used in the field of semiconductor manufacturing and micro-machining. It is mainly used to improve the adhesion between photoresist and the surface of substrates such as silicon wafers. HMDS enhances the adhesion of photoresist by forming a hydrophobic film on the surface of silicon wafers, thereby improving the pattern transfer accuracy during the photolithography process. HMDS adhesion promoter plays an important role in the field of semiconductor manufacturing and micro-machining. By providing high-quality surface treatment, it ensures the accuracy and reliability of the photolithography process. With the advancement of technology, the application methods and effects of HMDS are also constantly being optimized.
