HMI (Human-Machine Interface) operation panel and display is a device for human-machine interaction. The HMI operation panel is usually a touch screen used to control and monitor various industrial automation systems and equipment. It provides an intuitive way for operators to interact with automation systems, such as controlling process parameters, sending instructions, monitoring equipment status, and more. The HMI operation panel can be connected to PLC (Programmable Logic Controller), SCADA (Supervision and Data Acquisition System) or other control equipment to realize real-time control and monitoring of industrial processes. The HMI display is a device used to display the graphical interface and information on the operation panel. It usually uses high-resolution liquid crystal display technology, which can display rich graphics and text content, including real-time data, alarm information, trend graphs, operation buttons, etc. HMI displays are highly customizable and flexible, and can be laid out and designed according to application needs.
