Abstracts

According to our (Global Info Research) latest study, the global HMI Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The functionality of Human Machine Interface (HMI) software can vary considerably. Many software packages are HMI clients used with a variety of control products, such as DCSs, PLC, PACs or PC-based data acquisition systems. In addition to performing visualization functions, many of these HMI client software packag-es are also used for performing monitoring functions, such as alarming, as well as for data storage and printing management reports. Some of the more sophisticated packages also perform control functions. ARC considers script language programming to be an inherent function of an HMI client software package, rather than control and programming.

The increasing need to improve process efficiency in manufacturing plants is one of the primary factors behind the growth of this market. Manufacturing plants implement automation systems to increase the efficiency of the project and reduce the operational cost. Many vendors provide customizable HMI solutions and HMI devices running on third party software, which enables the end-users in designing analytical models. Process visualization and data availability is a necessity in manufacturing plants which is facilitated by HMI software by providing real-time data availability, reducing direct human interference in operations, and reducing process time.

The Global Info Research report includes an overview of the development of the HMI Software industry chain, the market status of Oil and Gas (Proprietary Software, Hardware-Independent and Open Source Software), Energy and Power (Proprietary Software, Hardware-Independent and Open Source Software), and key enterprises in
