The global Hoek Triaxial Cell market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hoek triaxial cell is a laboratory testing apparatus used for determining the mechanical properties of rocks and soils. It consists of a cylindrical cell that can confine a sample of rock or soil under controlled stress conditions. The cell allows the application of different pressures and the measurement of axial and radial strains, which helps in studying the behavior of the material under different loading conditions. It is commonly used in geotechnical engineering and rock mechanics research.
