Abstracts

According to our (Global Info Research) latest study, the global Hoist Chains market size was valued at US\$ 125 million in 2025 and is forecast to a readjusted size of US\$ 180 million by 2032 with a CAGR of 5.5% during review period.

Hoist chains refers to Chains for hoist. A hoist is a device used for lifting or lowering a load by means of a drum or lift-wheel around which rope or chain wraps. It may be manually operated, electrically or pneumatically driven and may use chain, fiber or wire rope as its lifting medium.

The main market drivers include the following:

Infrastructure construction

Demand growth: Globally, especially in the Asian market (such as China), policy support and high demand for infrastructure construction have driven the growth of the lifting chain market.

Case: The renovation plan for old urban communities in China's "14th Five-Year Plan" has driven the demand for building materials such as exterior wall insulation integrated panels, indirectly promoting the application of lifting chains in the construction field.

Manufacturing upgrade

Technology upgrade: With the upgrading and transformation of the manufacturing industry, factories and enterprises have an increasing demand for efficient and precise lifting machinery, and the requirements for intelligence and automation have increased.

Case: With the rise of intelligent manufacturing, the requirements for intelligence and automation of lifting chains are also constantly increasing, such as the popularization of functions such as unmanned driving and remote control.

Logistics industry development

Demand drive: The rapid development of the logistics industry, especially the popularization of automated warehousing and intelligent logistics systems, has driven the application of lifting chains in the logistics field.

Case: The rise of the e-commerce industry has increased the demand for efficient and accurate logistics equipment, promoting the application of lifting chains in warehousing and sorting systems.

Policy support

Policy promotion: The implementation of policies such as tax incentives, subsidies, and R&D investment provides a good development environment for the lifting chain industry.

Case: The Chinese government has increased infrastructure investment, enhanced national competitiveness, promoted economic growth, and indirectly promoted the development of the lifting chain market.

Environmental regulations

Environmental requirements: The strengthening of environmental regulations has prompted lifting chain manufacturers to develop energy-saving and environmentally friendly products to meet market demand.

Case: Energy-saving and environmentally friendly cranes use new power systems and energy-saving technologies to reduce energy consumption and environmental pollution, which is in line with global environmental trends.

The lifting chain market is driven by multiple factors such as infrastructure construction, manufacturing industry upgrades, logistics industry development, policy support and environmental regulations. International companies occupy the high-end market with their technological advantages, and domestic companies rise rapidly through technological innovation and domestic substitution strategies. In the future, intelligent,

energy-saving and environmentally friendly lifting chains will become the main driving force for market growth.
