A hollow chisel mortiser is a specialized power tool used for creating mortise and tenon joints in woodworking. These mortises are typically used in mortise and tenon joints, which are a common method of joining pieces of wood together in furniture and cabinet making. The tool consists of a drill bit with a cylindrical pilot and a hollow, four-sided chisel that surrounds the bit. As the drill bit rotates, it bores a hole into the wood, and the chisel removes the material around the bit, creating a square or rectangular hole.
