Abstracts

The global Hollow Core Anti Resonant Fiber market size is expected to reach \$ 6 million by 2029, rising at a market growth of 6.4% CAGR during the forecast period (2023-2029).

Hollow Core Anti Resonant Fiber can also be applied in the fields of fiber optic sensing, laser energy transmission, fiber optic gyroscope, polarization control, and THz wave transmission. HCARF in the THz band is usually made of various polymer materials, and the size is also large. It can be directly stacked from polymer tubes without drawing, or it can be manufactured using 3D (3Dimensional, 3D) printing technology. Although the loss level of the current THz-HCARF has not yet reached the stage sufficient for practical application, it has great advantages compared with metal THz waveguides. With the improvement of the preparation process and the development of new materials, the loss of THz-HCARF is expected to be further reduced. In terms of fiber optic gyroscopes, researchers have also applied HCARF to resonant fiber optic gyroscopes.
