Abstracts

The global Hollow Core Bragg Layered Fiber market size is expected to reach \$ 11 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

Hollow Core Bragg Layered Fiber (HCBF) is used as a fiber filter and can be used for output wavelength selection of lasers. HCBF is also used as a transmission medium for infrared lasers and femtosecond laser pulses. The single pulse duration of femtosecond laser is extremely short, usually tens to hundreds of femtoseconds, but its peak power is extremely large and its spectrum range is ultra-wide. The high damage threshold of HCBF and the light reflection characteristics of wide spectrum and large angle are very suitable for the transmission of femtosecond laser pulses. In addition, by adjusting the manufacturing material of HCBF, its working band can be changed. For example, when using plastic materials, the corresponding HCBF can support light transmission in visible light and THz bands.
