## Abstracts

The global Hollow Fiber Cartridges market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hollow fiber cartridges are filtration devices designed for the separation and purification of liquids in various industrial and laboratory processes. These cartridges consist of a bundle of hollow fiber membranes housed within a cartridge shell. The hollow fibers, typically made of materials like polyethersulfone (PES) or polysulfone, create a porous structure that allows for the selective passage of certain molecules or particles while retaining others. The design enables efficient filtration by utilizing the pressure difference across the fibers. Hollow fiber cartridges find applications in diverse fields such as biopharmaceutical manufacturing, water treatment, and food and beverage processing. They are utilized for tasks ranging from removing impurities and particles from liquids to concentrating and purifying specific components. The modular and scalable nature of these cartridges makes them adaptable to different filtration requirements, contributing to their widespread use in industries that demand precise and efficient liquid separation processes.
