According to our (Global Info Research) latest study, the global Hindered Amine Stabilizer (HALS) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Hindered amine light stabilizers (HALS) are chemical compounds containing an amine functional group that are used as stabilizers in plastics and polymers. HALS do not absorb UV radiation but act to inhibit degradation of the polymer. Light stabilizers trap free radicals once they are formed and are effective in retaining surface properties such as gloss and prevent cracking and chalking of paints. The combination with UV Absorber shows highly synergistic.
