Abstracts

According to our (Global Info Research) latest study, the global Home Appliance Chips market size was valued at US\$ 27119 million in 2025 and is forecast to a readjusted size of US\$ 50176 million by 2032 with a CAGR of 10.0% during review period.

Home appliance chips are application-specific integrated circuits (ASICs) used in home appliances to perform functions such as control, sensing, power conversion, and connectivity, covering everything from basic white goods to next-generation smart home terminals. They can be broadly categorized by function as: main control MCUs/SoCs responsible for overall appliance logic and human-machine interaction; motor control chips for motors, compressors, and fans; power management chips providing high-efficiency AC-DC and DC-DC conversion for various home appliances; and wireless connectivity chips providing access capabilities for Wi-Fi, Bluetooth, Thread, and other technologies.

In 2025, global Home Appliance IC sales reached approximately 7,281 Million Units, with an average global market price of around 3.62 US\$/Units. Production capacity reached 8,000 Million Units, with a gross profit margin of approximately 35%.

As domestic manufacturers enhance their capabilities in control boards, connectivity modules, and integrated system development, a number of local IC design companies are collaborating closely with home appliance manufacturers in power management, MCUs, and IoT SoCs. Through deep customization of firmware, communication protocols, and cloud platform interfaces, they are raising the barriers to entry. This collaborative model of 'chip + module + cloud' is gradually becoming widespread in smart air conditioners, smart refrigerators, dishwashers, and small appliances,

transforming the industry chain from one-way supply to collaborative development around specific scenarios. Simultaneously, retail channels and the aftermarket are also influencing chip selection. For example, 'smart sockets,' 'smart switches,' and upgrade kits with Wi-Fi and voice control functions are opening up new application opportunities for main control and connectivity chips.
