Home appliance OEM (Original Equipment Manufacturer) and ODM (Original Design Manufacturer) are two common production cooperation models in the home appliance industry. OEM refers to a manufacturer producing products or parts for another company according to its requirements, and marking the brand or trademark of the client on the product. In this model, the manufacturer focuses on the production link, while the client is responsible for product design, marketing, brand management, etc. ODM refers to a manufacturer designing and producing products for customers according to customer needs, and then marking the customer's brand or trademark on the product. In this model, the manufacturer is not only responsible for the production link, but also undertakes tasks such as product design and technical support, while the marketing, brand management and other links are the responsibility of the customer. The OEM/ODM models of home appliances have their own characteristics, and manufacturers and clients can choose the appropriate cooperation model according to their own situation and market demand.
