Abstracts

According to our (Global Info Research) latest study, the global Home Elevators market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A home elevator is primarily for residential use in private homes or apartments and has been designed to make it easier for homeowners to travel between the floors of their home. Most commonly, this type of residential lift is for older people who are finding the stairs challenging or individuals who have other mobility issues or disabilities and it offers them an alternative to a traditional stair lift. As residential elevator products have progressed in design and functionality, they are also popular with homeowners who are simply looking to improve their lifestyle or 'future-proof' their property for use in later life. Unlike elevators which are used in commercial buildings, offices and department stores, home lifts differ greatly in their size and style in order that the lifts are more suited to be installed in a private residential property.

In United States market, the core manufacturers of home elevators includes Otis, Inclinator etc and the top 2 companies hold a share about 28%.
