Abstracts

Home Energy Management Systems are devices that are installed in residential buildings to enable the provision of feedback on electricity consumption patterns and power consumption data for individual appliances. These systems perform pre-programmed functions, such as maintaining the temperature of houses. In addition, Home Energy Management Systems not only provide demand-response prompts from utility loads but also provide data about loads generated by microgrids. The data generated are provided to users, wherein they can view their energy consumption patterns and compare them with historical data.

Scope of the Report:
